Fixed Assets

FAS

The ADG Fixed Assets System (FAS) is designed to provide you with up-to-date information on all of your organization's physical assets. Whether it is time to change the oil in a vehicle, make a property transfer, or check depreciation, ADG's FAS is ready for the task.

Depreciation Schedule

The depreciation schedule calculates an asset's depreciation either monthly or annually and multiple depreciation schedules may be maintained for each asset (i.e., book, federal, state, or source of funds). Depreciating has never been so much fun!

Loan Amortization

Included in the system is a loan amortization schedule, along with a loan payment calculation program which features an extensive number of parameters such as interest rate, term of loan, loan amount, down payment, etc. The system can then calculate the payment amount based on the selected parameters.

Our Software

Utilizing the powerful benefits of modern web technologies, our software is developed for efficiency, flexibility, and compatibility

Extensive Tracking and Reporting

The system tracks purchases, transfers, adjustments, status changes, depreciation, insurance, and maintenance. FAS also features extensive reporting capabilities including acquired assets, disposed assets, surplus assets, asset insurance carrier, asset planning, asset forecasting and replacement cost.

About ADG

Since 1983 we have been serving customers at organizations with as few as 10 employees to as many as 2500 with budgets in the range of millions to 100's of millions. Whatever your size, we always put you, the customer, first.

ADG's FAS offers a feature-rich solution in an easy-to-use, best-of-breed package.

- *Preventative Maintenance:*

The preventative maintenance module is designed to track building maintenance, vehicle maintenance, costs, scheduling and usage. Any asset (building, vehicle or equipment) may be scheduled for maintenance based upon a selection of user-defined service plans.

- *Automated Work Orders:*

After a defined service plan is in place, a work order can be printed detailing services to be performed and the projected costs.

- *Analytical reports:*

Reports are available that examine costs and MPG. The system also tracks trips by drivers and vehicles.

- *Scheduling System:*

Facilitates scheduling of rooms, vehicles and equipment.

- *The Maintenance System:*

Facilitates billing for services or vehicles provided by one department to another department. This system integrates completely with the Accounts Payable module of the ADG Fund Management System (FMS) and allows a user to access the Fixed Assets System from within Accounts Payable to set up a new asset.

- *End User Customizable:*

It also offers customizable menus and reports on a per user basis to serve the needs of each individual role within the organization
